

This daily update contains important information for community pharmacy teams about the ongoing response to the COVID-19 pandemic.

In today's update: Better Health campaign resources; mental health training survey; PPE portal FAQs.

Are you making use of the 'Better Health' campaign resources?

The 'Better Health' campaign to help 'reset' the nation's health began at the end of July. Since the campaign launch, more resources have been added to **Public Health England's Campaign Resource Centre** to support the public messaging.

The COVID-19 pandemic has increased public interest in health, providing a unique opportunity for people to address their personal health goals by losing weight, quitting smoking, drinking less and looking after their mental health.

Recently added resources include posters with space to add local messaging, numerous digital assets, and messaging in other languages.

Learn more about the campaign and find links to resources

Mental health training survey

Those working in an education/training or managerial role are reminded that Health Education England (HEE) has launched a survey to explore current provision of mental health training opportunities for student, pre-registration and foundation pharmacists and pharmacy technicians.

The HEE Mental Health Training Programme Director is looking to take practical steps forward in promoting mental health pharmacy practice – across <u>all</u> pharmacy practice settings (including community) – and would like to hear about your education and training plans, and how they may have been affected by the pandemic.

Please **complete the HEE survey** by the end of the day on **Friday 28th August**.
